

Product details - field mapper integration

- Product Module (Basic Fields - title, SKU, description, price, quantity)
- Category Module (Basic Fields - title)

Screen 1:

- Import CSV/Excel file with Product data

Screen 2:

- Once I import the CSV/Excel file, Show 'field mapping' screen.
- Map system fields with CSV/Excel field.
- For e.g., system field is 'title' and csv field is 'Product title'. So In this case, left side show system fields list and on right side show dropdown of CSV/Excel heading fields.
- Also, take one field in CSV/Excel file for product categories. Where multiple categories for a product can be added separated by "|".
- If category exist in category, then just assign its id to product, otherwise add new category and then assign it to a product.

System Fields

Excel/CSV Import Fields

Field1 *

Select Field ▼

Field2

Select Field ▼

Field3

Select Field ▼

Screen 3:

- After submitting the mapping details, redirect user to product details page where he can see imported property data.
- SKU is a unique key. So if product exist with same SKU then update the product instead of adding new. There should not be multiple products with same SKU.
